Wrap around carton packer

Multiple folding arms model Octopus M1

The multiple folding arms wrap around carton packer **Octopus M1** is designed to serve the food, dairy, bottling and cosmetic industries for packing loose packs of products in wholesale carton packages.

The wrap around carton packer is intermediately motion operated. The wrapping cycle is based on 5 stations, 4 of which are for the wrapping process and the fifth is for extra service/special application during the packing process.

The folding arms are individually operated for each wing of the carton which is sealed with hot melted glue. These individually operated arms enable full flexibility and perfect tighten closing of the carton package.

The packer is one of the stages in the packing line, supplied by ROBOTECNICS company, as a turnkey system from the filling machine, conveying to packing, special applications and storage.

The ROBOTECNICS company offers a range of equipment, which includes tray forming, packers, stackers, palletizing, various conveyors for all sections and their dedicated functions. The ROBOTECNICS company specialized in automation applications, in general, and in machine constructions, in particular. The company develops machines for manufacturing process applications that are usually tailor made, such as packaging and filling machines, different types of handing systems, twist worms tunnels, and feed stars.
